

Here is an Allegory that may help anyone better see this problem of “science” coming to the alleged rescue of humanity, and this futility of a secular-only purported progress. It is intended to give a goodly whack on the backsides to those so-called "genetic & genome & DNA scientists" who are messing with God's Plan by suggesting that 'when God created our food supply, and even life itself, etc., He made a mistake, and therefore Science is here to correct that mistake with their GMO and DNA' adulterations:

## The Future Relationship between Mankind and God

Copyright (for what it's worth!) RJGardnerAtHotmail.com, March 5th, 2011

There was a group of scientists working in their honest zeal to help mankind, and, just for comparisons here, they had done far more than you and your colleagues have or ever could have accomplished, in the Genetic rearrangements and Genome and DNA mapping and sequencing successes, and in their DNA, gene splicing, cloning, and all the other “intervention” techniques so lauded by modern science. They knew they had already discovered most of the fundamental genetic life forms, and could accomplish all manner of other scientific miracles. So they decided to call a meeting with God and tell Him about this, and pronounce the Future Relationship between Mankind and God.

And God met them.

And they said, “God, we are very grateful for all you have done for us over the many years of existence, with your bountiful blessings cast upon us. But we scientists have used the intellect you gave us, doing so for good and favorable purposes to assist mankind. And we have discovered the secrets of Creation, in the Genome, the DNA and RNA, and other very technical details comprising the building blocks of life. It took us a long time to do it, but presently we have it reasonably all figured out. Having much of life and its necessities decided upon, and enhanced because of our beneficent works, we think we can get along now without any more of the Biblical Laws you have set down for us, and we also won't be needing any more of your help.”

And God said: “Is that right?”

“Why, yes,” said the scientists, “we have discovered and established our ability to create and sustain life itself, and we believe that while all your previous work in this world was very worthwhile, we can handle it now. We won't need you any more.”

And God said: “Think so?”

“Oh, absolutely,” they said. “We can create the more fundamental basics of life-forms by merely using common soil found most anywhere.”

God inquired further, and rather patiently, “Do you have any demonstrable evidences confirming this ability?”

“Indeed, we do,” they said, and, scooping up a handful of soil, a scientist was beginning to speak about it. “By using the available enzymes, proteins, and other creative substances found right here, we can . . .”

But God interrupted, and said, . . .

“Wait a minute, Dr. Scientist. I created *that* soil. Don't use anything *I* made. Go create your own dirt, and see what you can make of it.”
